What is FusionForge?

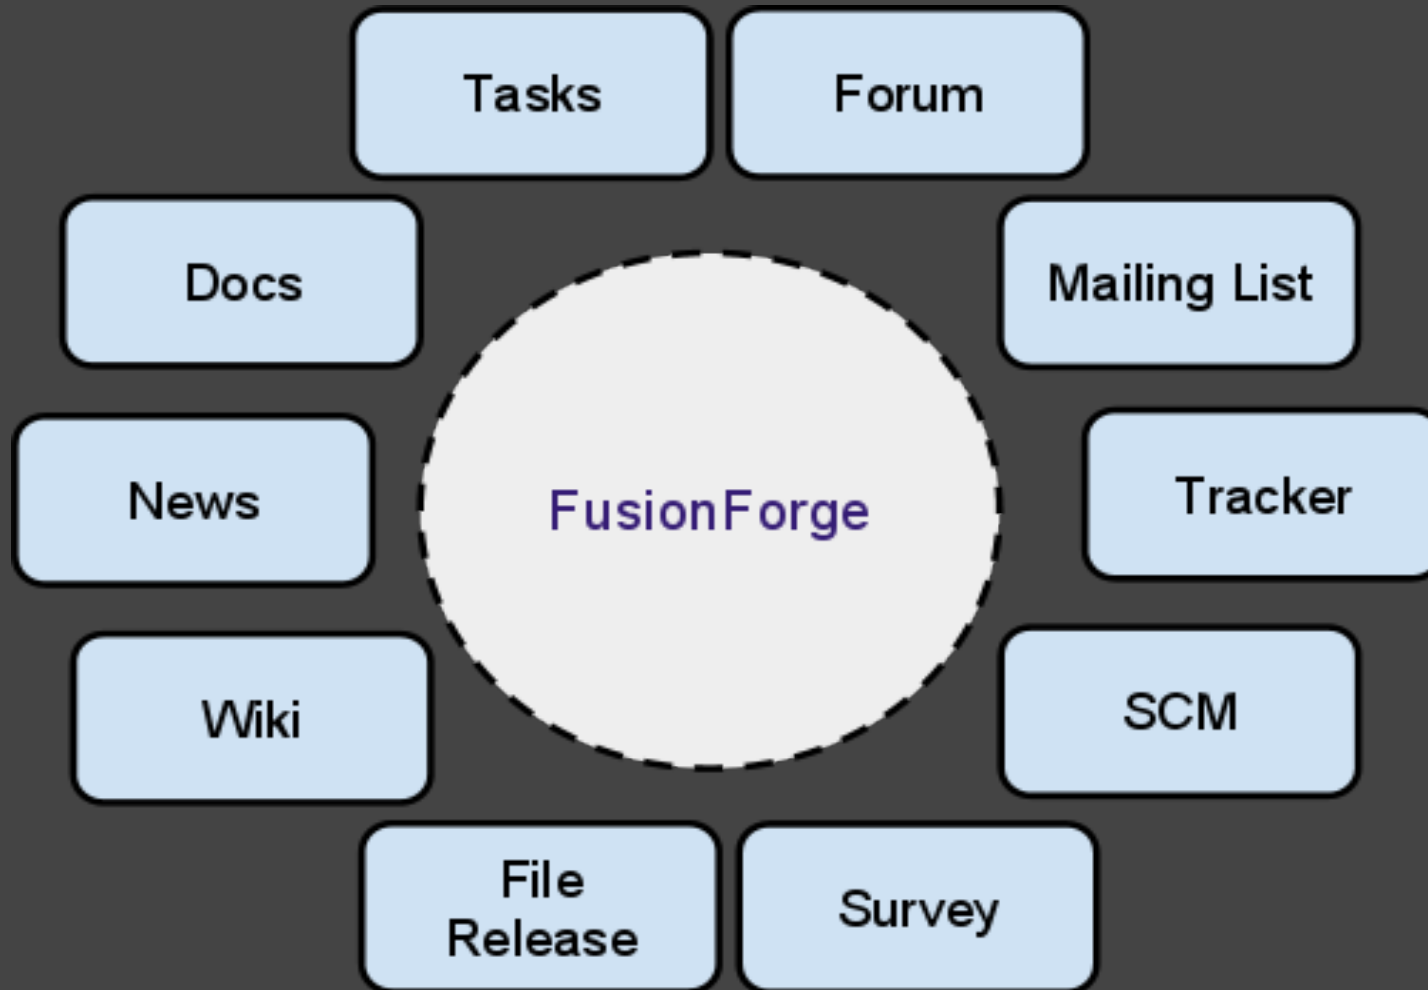

# What is FusionForge

FusionForge is:

- A collaborative development environment that gathers in one single place several tools useful for development teams
  - Communication tools (forums, mailing-lists, news, etc.);
  - Development tools (bug/patch trackers, project management, source control systems, etc.);
  - Community tools (file releases, software categorization, Web site hosting, etc.).

It is the continuation of the free software version of GForge, based on the code base that was maintained in parallel to the proprietary GForge AS version.

# What is FusionForge

SourceForge -> GForge -> FusionForge

FusionForge

# Why FusionForge

- A powerful plug-in system to add new features
  - ldapextauth
  - scmbzr
  - mediawiki
  - webcalendar
  - ...
- Open Source

# FusionForge Components

# Project Management

- User management
  - Role based
- Tasks management
  - Subprojects/Tasks hierarchy
  - Tasks progress/priority/status
  - Gantt chart
  - Import/Export CSV
  - Reporting
- Document
  - Upload/Download/Search
- Tracker
  - Tracker lists
  - Download CSV
  - Reporting/Monitor

# SCM

- Supports CVS, SVN, Bazaar, Darcs and Git
- Create repository automatically
- Supports PAM over SSH
